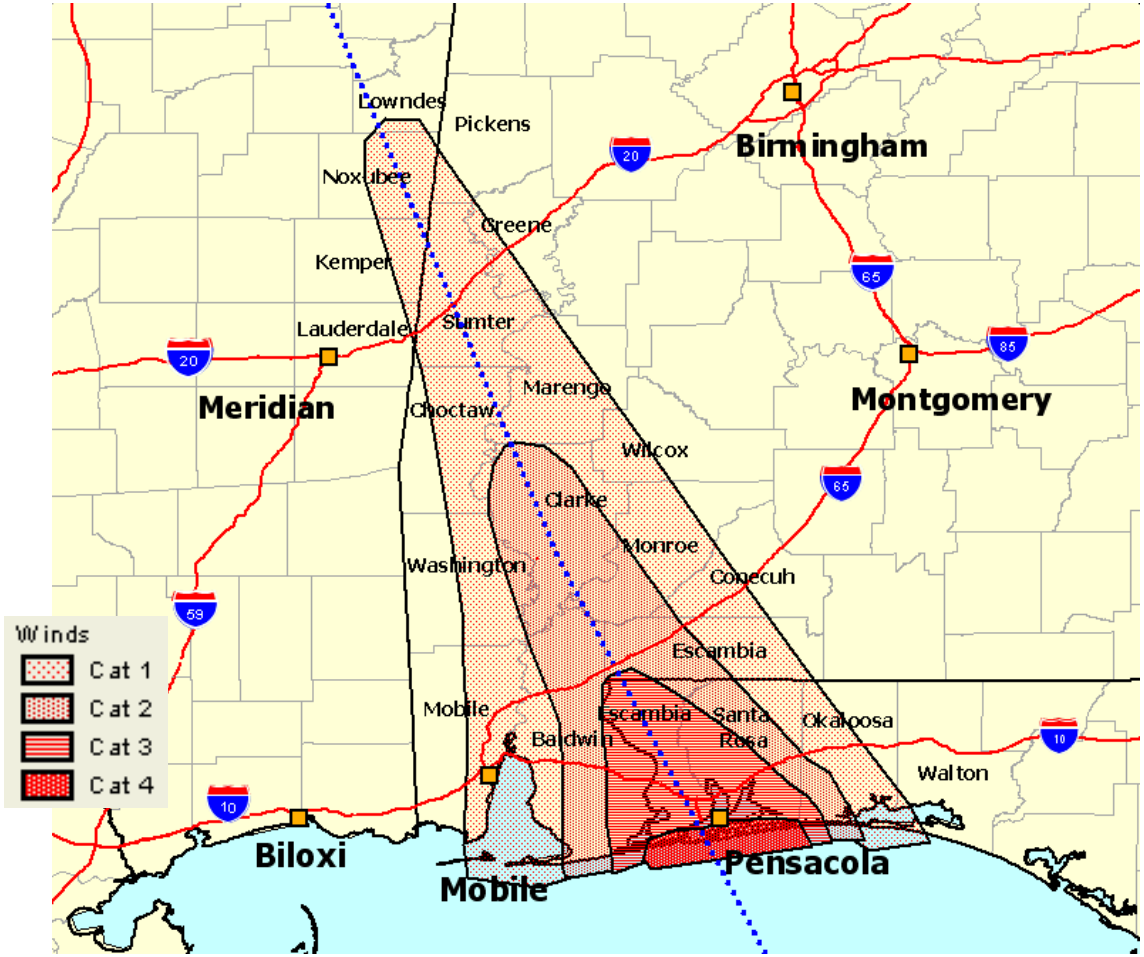
Hurricane Dennis Wind Distribution

Landfall Is Occurring

For Official Use Only!



Most Probable Landfall Wind Distribution

This hurricane scenario is based on a Category 3 storm making landfall in near proximity to Pensacola, FL.

A small Category 4 wind area has been included for barrier islands.

Information provided on this page displays the most probable hurricane track based on information from the National Hurricane Center (NHC). These projections are based on information from the NHC ***(1500 EDT 07/10/2005)*** forecast.

Details about this model may be obtained at
https://englink.usace.army.mil
or contact ENGLink at 1-877-936-4546

Hurricane Dennis Debris Model

Landfall Is Occurring

For Official Use Only!

Most Probable Landfall Debris Model Results

Florida – 9,502,000 yd^3
Alabama – 2,931,000 yd^3
Mississippi – 144,000 yd^3

Model results per county on following page

This hurricane scenario is based on a Category 3 storm making landfall in near proximity to Pensacola, FL

Information provided on this page displays the most probable hurricane track based on information from the National Hurricane Center (NHC). These projections are based on information from the NHC ***(1500 EDT 07/10/2005)*** forecast.

The amount of debris forecasted is possible total volume, not necessarily the volume that may need to be removed with Federal funds.

Details about this model may be obtained at https://englink.usace.army.mil or contact ENGLink at 1-877-936-4546

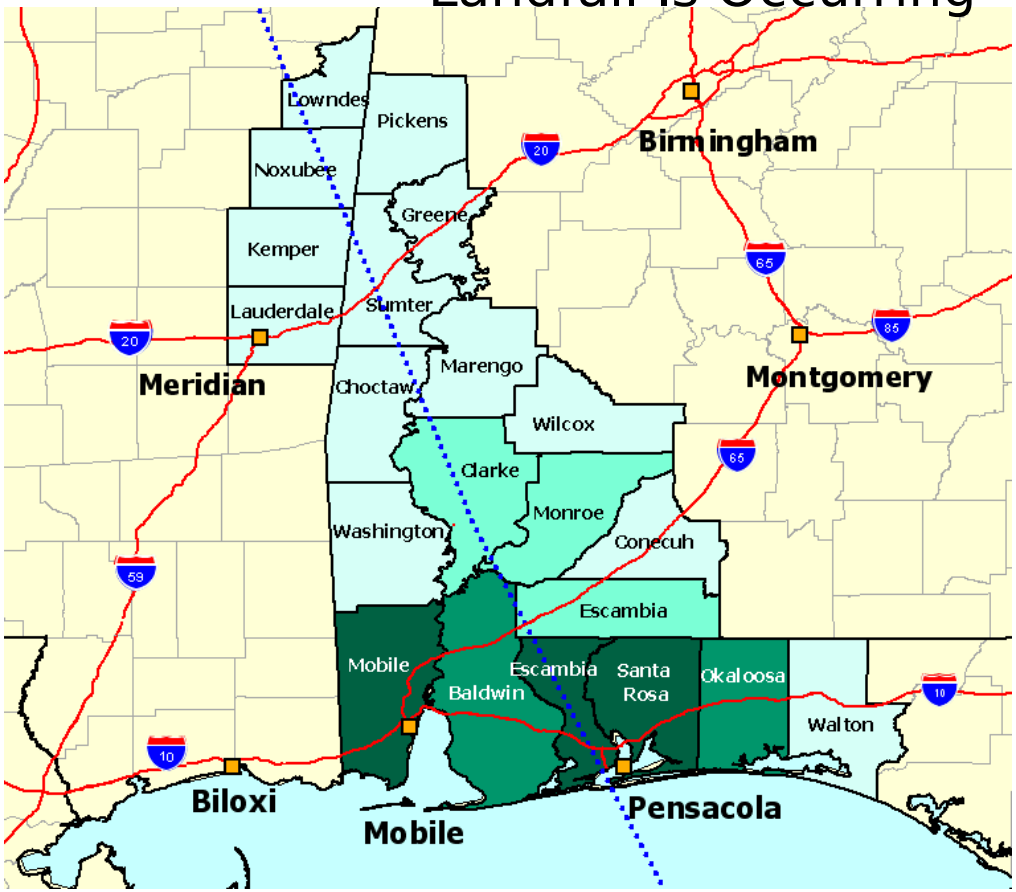
Hurricane Dennis Ice Model

Landfall Is Occurring

For Official Use Only!



Most Probable Landfall Ice Model Results

Florida – 2,320,000 pounds
Alabama – 1,403,000 pounds
Mississippi – 32,000 pounds

Model results per county on following page

This hurricane scenario is based on a Category 3 storm making landfall in near proximity to Pensacola, FL

Information provided on this page displays the most probable hurricane track based on information from the National Hurricane Center (NHC). These projections are based on information from the NHC ***(1500 EDT 07/10/2005)*** forecast. The intensity of this hurricane has been altered to complete model runs.

The amount of ice forecasted is based on Mission Guide Book requirements (8 pounds per day per person) and Ice SME input and represents a first day daily need.

Details about this model may be obtained at https://englink.usace.army.mil or contact ENGLink at 1-877-936-4546

Hurricane Dennis Temporary Roofing Model Results

For Official Use Only!

Most Probable Landfall Temporary Roofing Model Results

Florida – 10,200
Alabama – 4,000
Mississippi – 400

Model results per county on following page

This hurricane scenario is based on a Category 3 storm making landfall in near proximity to Pensacola, FL.

Information provided on this page displays the most probable hurricane track based on information from the National Hurricane Center (NHC). These projections are based on information from the NHC ***(1500 EDT 07/10/2005)*** forecast.

The amount of temporary roofing that may be required is based on 1% of housing units damaged in CAT 1 wind areas, 3% of housing units damaged in CAT 2 wind areas, 6% of housing units damaged in CAT 3 wind areas, and 5% of housing units damaged in CAT 4 wind areas. This only indicates possible need – not necessarily a mission to repair roofs.
